

## Lead Project Manager

### About Carbonplace

An exciting opportunity to rapidly scale and shape a start-up committed to driving climate action. Carbonplace is a global carbon credit transaction network that will enable the simple, secure, and transparent transfer of certified carbon credits. Developed by a group of financial institutions, Carbonplace's unique blockchain-enabled distributed ledger technology will enable the trust, transparency, and accessibility required to open the voluntary carbon market to the world and accelerate global climate action. In joining this new & unique venture, you will engage with teams that have a startup mindset without the worry of associated start up risks. You will be working with a consortium of financial institutions with a core objective of delivering an MVP, and executing Series A funding.

### About This Role:

Carbonplace are seeking a highly ambitious Head of Project Management to join the team. We are looking for an individual with extensive project management skills and a proven ability to translate strategic visions into successfully executed plans. You will work closely with senior management, whilst acting as a bridge between commercial and technology teams, to drive the development and management of deliverables towards the company's identified milestones.

### Responsibilities:

- Drive the Carbonplace roadmap by planning, executing and maintaining project management processes in the areas of project timeline, resource management, quality management, communications management, risk/issue management, and change management
- Collaborate with senior management and stakeholders to realize and drive organizational vision and strategy.
- Understand and engage with technical teams, communicating requirements and progress to non-technical audiences.
- Communicate with stakeholders in a variety of countries to understand business objectives
- Conduct ad-hoc data analysis to review project data & inform decision making.

### Location and Commitments:

We offer hybrid working, with a minimum of 2-3 days a week in the City of London office.

### Candidate Requirements:

- 3+ years experience in technical project management, ideally within the financial services industry, a FinTech start-up or scale-up.
- Experience or understanding of global Carbon markets, bank payment processes, emerging settlement technologies investment banking and Series A funding (financially fluent) is favourable.
- Track record of working with stakeholders at varying levels, in both technical and commercial teams, across a number of countries.
- An understanding of emerging and innovative technologies, and how to shape IT strategy and delivery in order to leverage those technologies

**Important information:**

- A degree or equivalent professional qualifications are preferred, although not required.
- We are hoping for someone who can join Carbonplace promptly, commencing in this role from Q4 2022.

**Remuneration & Benefits:**

Competitive based on experience.
